

MIHIR BAGADIA

Gainesville, FL | +1 (352) 328-1507 | mihir.bagadia@ufl.edu | linkedin.com/in/mihir-bagadia

SUMMARY

Data Analyst with M.S. in Information Systems and Operations Management and experience turning complex data into actionable insights. Skilled in Python, SQL, Tableau, Power BI, Excel, ETL, statistical analysis, and dashboard development, with a focus on data quality, scalable reporting, and stakeholder decision support.

SKILLS

Programming Language: Python (Pandas, NumPy), SQL, R, JAVA, Objective C, HTML

Data Analysis: Statistical analysis, Hypothesis testing, Logistic regression, Data cleaning, Feature engineering, ETL, Alteryx

Visualization & BI: Tableau, Power BI, Microsoft Excel (PivotTables, reporting), Streamlit, Matplotlib, Google Analytics 4

Databases & Platforms: MySQL, Vector databases, FAISS, Chroma DB, AWS, Google Colab

AI Frameworks: Langchain, Retrieval-augmented generation (RAG), LLM evaluation, Hugging Face embeddings, Generative AI

Business & Collaboration: KPI reporting, Dashboard requirements, ad-hoc analysis, Process improvement, Stakeholder communication, Cross-functional collaboration, HubSpot CRM

PROFESSIONAL EXPERIENCE

University of Florida

Aug 2025 - Apr 2026

Teaching Assistant - System Design & Development / Business Database Systems

Gainesville, FL

- Enabled 100+ graduate students to resolve database, system-design, and development challenges by providing technical guidance on troubleshooting, environment setup, and complex course concepts.
- Coordinated end-to-end exam logistics for 3 graduate-level courses across students by partnering with 2 faculty members to standardize grading rubrics, ensuring zero assessment delays across 2 full semesters.

Hvantage Tech Solutions Pvt. Ltd.

Dec 2023 - Apr 2024

Software Engineering Intern

Indore, India

- Engineered a financial document Q&A chatbot by architecting a Python-based RAG pipeline integrating four chain strategies (Stuff, Map Reduce, Map Re-rank, and Refine) across multiple vector data stores.
- Strengthened response reliability by benchmarking 21 model configurations across text splitters, embedding models, retrieval methods, and chunk sizes, identifying top-performing setups that produced correct responses with zero incorrect outputs.
- Increased chatbot response accuracy from 65% to over 90% by conducting iterative multi-model QA testing and optimizing Langchain pipeline parameters, reducing manual review effort across document-query workflows.

Jio Platforms Limited

May 2023 - Jul 2023

Data Science Intern

Mumbai, India

- Improved visibility into LTE/5G energy usage by developing an interactive Python and Streamlit dashboard that consolidated multiple CSV files, calculated net power consumption, and enabled state- and site-level filtering.
- Streamlined operational workflows by 10% and identified and flagged high-loss, faulty sites by performing deep-dive analysis on state-level power data, providing data driven strategy that informed stakeholder decision-making.
- Analyzed power utilization across 4 Indian states into visual stakeholder reports using Python-based graphical analysis, identifying top 10 underperforming sites and presenting findings to cross-functional leadership.

PROJECTS

Gainesville Traffic Crash Analysis

Mar 2026 - Apr 2026

Tech: Python, Pandas, Google Colab, ArcGIS, Chi-Square Testing, Logistic Regression

- Transformed Gainesville crash records from 2015–2025 into an analysis-ready dataset by cleaning inconsistencies and engineering crash type, severity, time-of-day, and intersection features.
- Evaluated fatality risk using EDA, chi-square testing, logistic regression, and ArcGIS mapping, identifying three high-risk corridors and peak crash windows while confirming crash type as a significant predictor of fatal outcomes.
- Supported data-driven transportation planning by translating statistical and geospatial findings into actionable recommendations focused on pedestrian and cyclist safety in recurring crash hotspots and high-risk periods.

EDUCATION

University of Florida

May 2026

Master of Science in Information Systems and Operations Management, Data Science Concentration

Gainesville, FL

GPA: 3.79/4.00 | Relevant Coursework: Analytics Programming, Quantitative Managerial Analysis, Statistical Analysis for Managerial Decisions, Data Visualization, Business Database Systems, Data-Decision Support, Advanced System Design and Development, Managerial Economics, Project Management, Marketing Management, Organizational Behavior.

The LNM Institute of Information Technology

May 2024

Bachelor of Technology in Computer Science and Engineering

Jaipur, India

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Cloud Computing, Database Management Systems, Data Science, System Design
